Whole House Surge Guard® Provides An Additional Line Of Defense Against Occasional Surges for Electromechanical Equipment

What Is Surge Guard?

As your electronic equipment becomes more complex, the need to protect them from harmful voltage surges becomes more important. The delicate chips used in many of today's appliances are vulnerable to even small surges that you can't detect. For this type of sensitive equipment, 2nd stage indoor devices are recommended.

Why Do I Need Surge Guard?

Horry Electric already has lightning and surge protection built into its system to guard against most voltage surges caused by birds, animals or trees contacting power lines, accidents involving utility poles, lightning storms and other disturbances. Even with this protection, however, an occasional voltage surge can reach your home, and your unprotected electrical and electronic equipment may be at risk.

With many Surge Guard options to choose from, you can customize your protection to meet your needs. Our meter base units attach at the meter base to give your home a level of protection from power line surges that could be harmful to your motorized equipment. Other Surge Guard options feature second stage protection. Special Surge Guard units designed for phone, computer modem, cable TV, satellite dish and TV antenna lines are also available and are highly recommended.

What Can Surge Guard Do?

Surge Guard helps prevent damage to electrical and electronic equipment by suppressing, stepping down voltage spikes and surges.

Will Surge Guard Protect My Home From Lightning Strikes?

No. Surge Guard is not designed as a substitute for lightning rods or other devices intended to protect people and property against direct or nearby lightning strikes. It is designed to protect equipment against power surges.

How Do I Know What Devices Are Best For Me?

With so many Surge Guard options available, Horry Electric can tailor a protection program to fit your particular needs. And you can add additional protection as your needs change. Come by and talk to an energy expert to find the right protection for you.

A good ground system is essential for surge equipment to work properly.
